NASSCOM is the premier trade body as well as the Chamber of Commerce of the IT-BPM sector in India. It is a not-for-profit organisation and has emerged as the authentic voice of this industry in India. It is also the single reference point for all information on IT industry in India. NASSCOM publishes an annual edition of its Strategic Review to disseminate the latest status of the industry.

FOREWORD

“
The industry is re-shaping itself to maintain its growth trajectory. Its outlook remains bright and the sector will remain a game changer in this decade.”

2012 turned out to be another year where uncertainty was the only thing that was certain. Persistent economic weakness continued to sap our abilities to address environmental challenges. But shocks are more than just natural phenomenon and, as events since 2008 show, they are increasingly systemic – transcending boundaries between geographies, markets and politics. In an interdependent, fast moving world, uncertainties are amplified – exposing many and insulating few. This presents new challenges for public and private sectors which need to be more agile and able to experiment with different development solutions in the face of rising complexity and improbabilities. This in turn is the new role of technology in general, to enhance customer capabilities, help open untapped markets, drive transformation and create a positive impact on business outcomes.

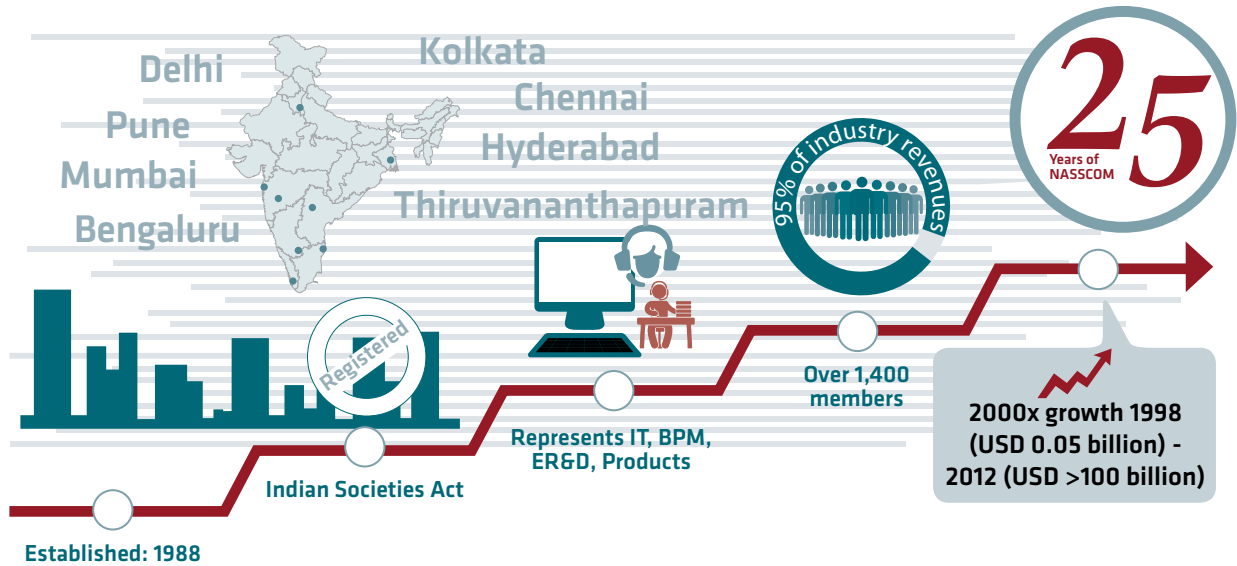

The Indian IT-BPM industry has remained a global powerhouse because it has not remained a stationary target. It has exhibited rapid evolution in terms of expanding their vertical and geographic markets, attracted new customer segments, transformed from technology providers to strategic business partners, and offering a considerably wider spectrum of services over the years. What is emerging as a crucial differentiator going forward is the Indian industry’s ability to deliver enterprising solutions- IP driven, multi-platform and productised services. At the same time, the industry is leading the drive to design solutions incorporating social, mobile, analytics and cloud technologies to provide innovative, enterprising answers to the unique challenges of this decade.

The Indian IT-BPM sector is estimated to aggregate revenues of USD 108 billion in FY2013, with exports touching USD 75.8 billion, growing at 10.2 per cent. During this period, direct employment is expected to reach nearly three million, an addition of 188,300 employees, while indirect job creation is estimated at 9.5 million. Domestic IT-BPM services revenue is expected to grow at 14.1 per cent to gross ₹ 1,047 billion in FY2013. Strong economic growth, rapid advancement in technology infrastructure, increasingly competitive Indian organisations, enhanced focus by the government and emergence of business models that help provide IT to new customer segments are key drivers for increased technology adoption in India.

NASSCOM reaffirms its commitment to facilitate the industry’s growth towards its 2020 vision. This report assesses various factors relating to the Indian IT-BPM sector performance and key trends in the current fiscal year (FY2013), reviews the key components of India’s value proposition and provides a view on the outlook projected for the global and the Indian IT-BPM sector. This annual report is the only one of its kind assemblage of facts and indicators, and an apogee of NASSCOM’s research efforts throughout the year. We trust you will find the report useful and we welcome your feedback and comments.
